

BRAINREAD:

How Does the Brain Learn to Read?

We are seeking children diagnosed with autism, ages 7-13, to participate in a reading study at UAB that includes a complimentary 10-week intervention for improving reading comprehension.

What will you be doing?

You will complete a family history interview and surveys. Your child will complete paper and pencil tests, an MRI scan, and a reading comprehension intervention

What are the benefits?

Your child gets the opportunity to participate in an intensive intervention program at no cost.
You will also help us learn more about how children understand what they read.
Your child will be paid up to \$250 for their participation.

Who can participate?

Participants should have strong reading fluency and difficulty in reading comprehension. Must be diagnosed with ASD, native English speaker, and must not have dyslexia, braces, or claustrophobia
